

# Detailed project plan

## Project Plan (2-Week Timeline)

Team of 4 (A, B, C, D)

| Day         | Dates  | Tasks   | Assigned To | Deliverable                                  |
|-------------|--------|---|-------------|--|
| 1           | Week 1 | Kick-off meeting: confirm roles, repo, environments. Finalize Phase 1 docs.                                   | All         | Phase 1 Docs ready, Kickoff Notes            |
| Milestone 1 | Week 1 | Environment setup validated (Python, Queue running, Git repo ready)   | All         | "Ready to Code" checklist passed             |
| 2           | Week 1 | Master: implement task enqueue in <code>master.py</code><br><br>Crawler: stub <code>fetch_and_parse()</code>  | A, B        | Basic message passing tested                 |
| 3           | Week 1 | Indexer: stub Whoosh indexer in <code>indexer.py</code><br><br>Client: scaffold CLI in <code>client.py</code> | C, D        | Basic Whoosh schema created, CLI initialized |

|                    |                      |   |                |  |
|--------------------|----------------------|---|----------------|--|
| <b>Milestone 2</b> | <b>Week 1</b>        | <b>All components can start and stop without crashing (empty pipelines)</b>                           | <b>All</b>     | <b>Initial code skeleton verified</b>            |
| <b>4</b>           | <b>Week 1</b>        | <b>Integrate A → B: master → crawler passes tasks, B logs fetched HTML<br/><br/>B → C: write JSON</b> | <b>A, B, C</b> | <b>JSON crawl records saved locally</b>          |
| <b>5</b>           | <b>Week 1</b>        | <b>Integrate C: read JSON, index text → Whoosh<br/><br/>D: connect CLI search to Whoosh</b>           | <b>C, D</b>    | <b>Search finds URL for a keyword</b>            |
| <b>Milestone 3</b> | <b>End of Week 1</b> | <b>End-to-end basic flow completed (crawl, store, index, search)</b>                                  | <b>All</b>     | <b>MVP v0 Ready (Minimum Viable Product)</b>     |
| <b>6</b>           | <b>Week 2</b>        | <b>B: Add link extraction; Enqueue new links into queue</b>   | <b>B</b>       | <b>Recrawling depth-1 operational</b>            |
| <b>7</b>           | <b>Week 2</b>        | <b>A: implement retry logic; B/C: add logging everywhere</b>  | <b>A, B, C</b> | <b>Error handling + Monitoring logs ready</b>    |
| <b>8</b>           | <b>Week 2</b>        | <b>D: enhance CLI – seed list, crawl start, progress monitor</b>                                      | <b>D</b>       | <b>CLI fully functional for crawl and search</b> |

|             |               |   |     |                                       |
|-------------|---------------|---|-----|---------------------------------------|
| 9           | Week 2        | Full end-to-end test (10 seeds, depth=2), debugging | All | Final Test Report                     |
| Milestone 4 | End of Week 2 | Full system operational; bugs resolved              | All | Ready for Phase 2 Submission          |
| 10          | Week 2        | Final fixes, polish, README update, prepare demo    | All | Final Code + Documentation submission |

---

## Role Key

- **A (Master Lead):** Implements and tests task scheduling, retry logic.
- **B (Crawler Lead):** Fetches pages, extracts text & links, writes JSON.
- **C (Indexer Lead):** Builds Whoosh index, ingests JSON, handles searches.
- **D (Client & Testing Lead):** Develops CLI/UI, orchestrates tests, demo prep.

---

## Notes

- **Git Workflow:** Feature branches for each component, merge into `main` by end of day.
- **Code Testing Requirement:** Every push to `main` branch must run basic test cases. Unit tests are preferred, but at least functional tests for crawler, master, indexer.
